

## Challenge #1: Bootstrap - Grid Basics (10 minutes)

Difficulty level: ★★

Resources [LINK](#)

In this exercise, you'll improve the layout of the webpage `justin.html` by completing **2 tasks**. This exercise will reinforce your understanding of Bootstrap's grid system and utility classes.

### Instructions

#### 1. Skeleton Files:

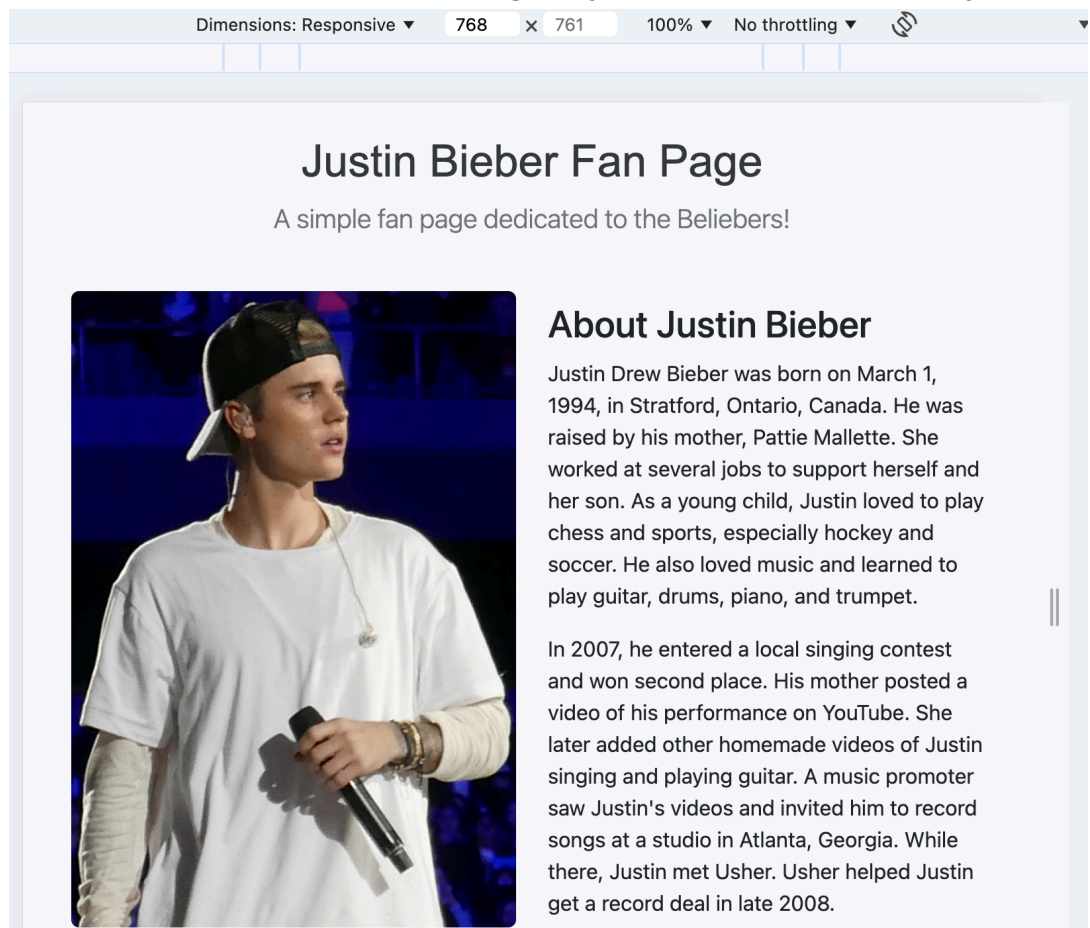

- [Week3\\_InClass.zip](#) → (unzip) Week3\_InClass → Challenge1
- You will find **2 skeleton files**:
  - `justin.html`: The main HTML file.
  - `styles.css`: The CSS file you'll use to style the page.

#### 2. Task 1

- Style the heading & paragraph using Bootstrap's utility classes to make the fan page visually appealing. **Use Bootstrap's utility classes.**

#### 3. Task 2

- Create a two-column layout where:
  - One column should contain a picture of Justin Bieber, and
  - The other column should contain a short bio.
- Ensure that the layout is **responsive**. The user will view the webpage in 2 devices:
  - A **medium-sized** screen (e.g. a tablet's horizontal screen view & laptop screen). In this case, both the **picture** and the **biography text** must be shown **side-by-side**.

- A screen whose width is **smaller than the medium**. In this case, the **picture** will be shown and then the **biography text** must be shown **below the picture**.
